

Non-woven Banners

As a leading banners manufacturer, we know that being able to offer convenient to use and innovative products is a must. Therefore, we would like to introduce to our clients innovative and ultra-light advertising banners that are equipped with special perforations. The advertising means are made of non-woven fabrics, which allowed to limit the weight of the banner to absolute minimum.

Non-woven banner promotional

Non-woven banners are performed on the non-woven basis of the following diameters: 0.97 m and 2 m of width. The available length of the roller can be: 20, 25 or 50 meters. The standard material used in the production of the *non-woven banners* is the 130g fabric - its usage makes the whole product very light and convenient to use.

Each of the banners of this type may be equipped with 6 or 10 mm eyelets situated every 50 cm. What is more, in order to make the installation easier, there are hooks and a rubber expander available. To keep the banner in the unchanged shape, we recommend to use top/bottom bars and the string attached to it. The **non-woven banners** are rolled up, which makes their delivery and storage less problematic.

A huge advantage of these promo means is that they can be prepared in almost every size - we cut them with the use of thermal cutting method. Taking into account it is economical and easy to fix, we do not wonder these banners are our bestsellers.
